MANAGEMENT ON-THE-JOB M.Sc.

PROGRAM OBJECTIVES

We provide sound management expertise coupled with key digital qualifications for management positions in the 21st century workplace. This master's degree offers future managers the ideal preparation for the many and varied management challenges of our time. One focus of the degree program is on digitalization. Each semester, you will acquire skills that will equip you to help shape the digital transformation of companies in your role as a manager. This master's degree is perfect for future managers who want to be successful in the digital era.

PROGRAM STRUCTURE

This degree program has a modular structure and the option to study part-time while working has proven successful for many years. Digital and transformational skills are taught every semester, then expanded upon by being closely interlinked with central management subjects. The program's international approach is bolstered by at least one module in English per semester and an international field trip.

PROSPECTS

The degree program prepares you to take on demanding specialized and managerial tasks in private companies and public enterprises in higher-level civil service. With the M.Sc. in Management, you have a degree that enables you to take advantage of career opportunities flexibly and independent of industries. The degree also qualifies you to pursue a doctorate.

"I particularly appreciated the close interconnection of theoretical concepts and practical case studies, as well as the international field trip. This enabled me to enhance and expand my professional, methodological, and social skills in an international context."

Lars Ripperger, graduate
